SUMMARY

Aspiring Software Engineer specializing in Java, C++, SQL, and Python. Experienced in full-stack development, IoT systems, and AI data pipelines, with a strong foundation in OOP principles, SQL querying, and data validation across production environments. Seeking hands-on experience to grow as a developer and contribute meaningfully to the field.

WORK EXPERIENCE

Remotasks

2022 – 2026

EQC Quality Assurance Auditor

- Audited quality assurance and data validation for large-scale AI 2D and robotics datasets, ensuring 100% compliance with client project specifications and improving overall model training accuracy.
- Coordinated with cross-functional teams to enforce data quality standards across large-scale AI training projects, helping the team sustain consistent output quality across multiple concurrent projects.

Benchmark Valuers and Credit Solutions Inc.

Feb 2026 – June 2026

Web Developer & Data Specialist Intern

- Developed and maintained the company website using React and integrated APIs to streamline client feedback and inquiry handling.
- Sourced, organized, and validated comparable property data for land appraisal valuations, ensuring data accuracy and consistency across Excel and database records.

PROJECTS

ShineGuard Hulo – IoT Smart Streetlight Predictive Maintenance System

Nov 2025 – May 2026

Full Stack Developer

- Developed an IoT hardware streetlight monitoring system managing 32 physical nodes, integrating ESP32/Arduino microcontrollers with real-time telemetry data.
- Architected the system architecture of a full-stack municipal monitoring platform built on PHP, MySQL, Firebase Realtime Database, and AWS EC2 with a responsive JavaScript frontend, reducing manual operational overhead and enabling real-time system reliability across all monitored nodes.
- Integrated a Zero Trust Architecture (ZTA) security framework enforcing a 3-tier RBAC system, secondary authentication verification (SBA), and SHA-256 cryptographic audit logs, resulting in zero security breaches and blocking all unauthorized access attempts across all system levels.

Deltech – E-Commerce Web Platform

Jan 2025 – May 2025

Backend Developer

- Designed and implemented full CRUD (Create, Read, Update, Delete) functionality in PHP for core modules including user accounts, product catalog, and order management, backed by a relational MySQL database.
- Handled core backend operations for authentication, cart management, and order tracking, along with a rule-based automated chat support feature, automated PDF receipt generation, QR code integration for order verification, and an admin dashboard for managing products and orders.

Malaya Solar Accounting System

Sept 2024 – Dec 2024

Backend Developer

- Developed a responsive accounting and resource-planning application using PHP, MySQL, Vanilla JavaScript, and Bootstrap 5, improving project cost visibility and workflow management for client contracts.
- Built a financial tracking module with full CRUD functionality that auto-calculated budgets, actuals, taxes, and variances, backed by an interactive Chart.js dashboard and secured with role-based session guards and MySQLi prepared statements.

SKILLS

Technical Skills:

- Programming Languages: Java, PHP, JavaScript, Python, C++, C#
- Database Management Systems: MySQL, Firebase, Supabase
- Data & Analytics: SQL, Excel, Chart.js, Quality Assurance & Validation, Dataset Annotation & Labeling
- Libraries & APIs: React, Chart.js, Leaflet.js, TCPDF, jsPDF, Firebase JS SDK, Mailtrap API
- DevOps & Tools: Docker, Kubernetes, Git, GitHub, Git Bash, XAMPP, AWS EC2
- Software Testing & QA Automation: Selenium, Jenkins

EDUCATION

Bachelor of Science in Information Technology

2022 – 2026

University of Makati

Dean's Lister 2022 – 2026
